

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. CHRONOLOGICAL TABLES.

THESE Tables are published in order to enable those at work on the Inscriptions of Southern India readily to ascertain the date of any document, or record on stone. The *Śalivāhana Śaka* era being the one most commonly used, it is placed in the first column. The *Kaliyuga* era is very commonly inserted in addition to the first, especially in the later inscriptions. The *Kollam* era of Quilon is only used in the Southern Tamil country and in Travancore. The name of the cyclic year occurs in almost all the inscriptions of Southern India since the tenth century. The year of the *Hijra* is only used in Muhammadan inscriptions. Burnell's "*South Indian Palæography*" (pp. 70—80) contains some very useful notes on the eras in use in the Madras Presidency. Prinsep's "Indian Chronological Tables," in Thomas's edition of the former's "*Indian Antiquities*" (Vol. II, pp. 131—214), constitute the most critically accurate information yet published on the subject. And Cowasjee Patell's "*Chronology*" (London: Trübner and Co., 1866) may with advantage be consulted; as well as Brown's "*Cyclic Tables*."

Taking the *Śaka*, *Kaliyuga*, and cyclic years—which may be considered, for all ordinary purposes, to commence and finish simultaneously—as my base, I have thought it best to approximate the other eras to these, rather than to approximate all eras to the Christian, as is often done. And, since the *Śaka*, *Kaliyuga*, and cyclic years may be considered to commence together about March each year, it follows that the *Kollam Aṇḍu* of Quilon, which commences about September, runs half with one, and half with another of the former years; while the Christian year, commencing in January, runs three-quarters with one, and a quarter with the following of those standard years. Hence I have printed the two *Kollam* years in numerals of the same size, meaning that the *Śaka*, &c., year corresponds to half of one and half of the next years so printed; while the large and small figures of the Christian years mean three-quarters of the first and a quarter of the second. Thus, in the *Śaka* year 938, *Kaliyuga* 4117, cyclic year *Nala*, there were six months (or half) of the *Kollam* year 192, and six (or half) of 193; nine months (or three-quarters) of the Christian year A.D. 1016, and three months (or one-quarter) of A.D. 1017. If this be borne in mind, the difference in size of the figures will materially assist those desirous of ascertaining approximately the correspondence of dates in the different eras. But it must be strictly remembered that, in reality, there will be in every year a few days which vary, and therefore, if great accuracy be required, a far closer calculation must be made. For such purposes Prinsep's Tables will be found to be the most reliable guide.

The *Hijra* year,—commencing July 16th, A.D. 622 (the day following Muhammad's flight to Medina, which took place on the night of Thursday, 15th July),—being a lunar year, is incapable of being approximated to the solar years in a convenient tabular form, and I have therefore inserted in each year the actual day of its commencement in the corresponding Christian era. Where the *Hijra* date is given in an inscription it would be very rare to find any other era referred to, and therefore it seemed needless to make any tabular approximation between the Muhammadan and Indian systems.

SEWELL'S CHRONOLOGICAL TABLES.

(Note—to be kindly inserted.)

A word of warning is necessary for the guidance of those desirous of using these tables. It must be remembered that they were drawn up mainly for the use of those at work on inscriptions and historical documents; and the system adopted has been that of Prinsep, from whose "*Indian Antiquities*" (*Useful Tables*, p. 179,) the following note is extracted:—

"It should be borne in mind that the natives, in speaking or writing a date in simple years, always express the number of years *expired*, not the current year, as is the custom in Europe. When they mention the month, therefore, they mean the month of the following current year: but as the numerical denomination of the Hindú year remains unchanged throughout it, no thought need be taken of the distinction of *expired* years, unless where a calculation has to be made from an initial epoch. In common parlance they may be treated like the current years of any other system, as being more consonant with our ideas and less liable to cause mistakes in transferring dates to and fro."

In using these tables, therefore, it must be remembered that the *S. Saka* and *Kaliyuga* years entered against the name of any particular cyclic year are the years whose numerical denomination is actually used in documents throughout that year, but that the real astronomical number is the one next following.

Thus; for the current year, *Chitrabhānu* (1882-1883), all documents would bear the *Saka* number 1804, and the *Kaliyuga* 4983, but actually the current *Saka* is 1805 and the *Kaliyuga* 4984. The expression used in documents would be "*Saka* 1804 having expired," or "following on *Saka* 1804."

R. SEWELL.

MADRAS, April 1882.
